

# USP Standards to Support Quality of Peptide and Oligonucleotide Therapies

---

Kevin Carrick

USP Workshop on Therapeutic  
Peptides and Oligonucleotides  
April 9, 2024

# Agenda

- ▶ USP Standard Overview
- ▶ USP Peptide Standards
- ▶ USP Oligonucleotides Standard Development

1

# USP Overview

---

**To improve global health through public standards and related programs that help ensure the quality, safety, and benefit of medicines and foods.**

## Standard Setting

- ▶ **Monographs:** Specifications for pharmaceutical articles in commerce (from release through product shelf life)
- ▶ **General Chapters:** General Chapters cover broader topics and more widely applicable methods. These are not linked to individual products unless referenced in a monograph.
- ▶ **Physical Reference Standards and Analytical Reference Materials:** Well-characterized materials demonstrated to be suitable for intended use

# Collaborating to address shared challenges

## Expert volunteers

Provide expertise and enable transparency in the development of quality standards

## Regulators

Regulators, including the FDA, depend on a quality-assured scientific basis for decision-making

## Industry

Manufacturers depend on validated methods to bring quality pharmaceuticals to market

# We recognize and appreciate our volunteers. Public, transparent collaboration through USP

## USP Standards to Therapeutic Support Peptide

---

## Informational General Chapters

*<1052> Biotechnology-derived Articles --  
Amino Acid Analysis*

*<1503> Quality Attributes Of Synthetic  
Peptide Drug Substances*

## Published in PF 48 (1)

*<1504> Quality Attributes of Starting Materials for the  
Chemical Synthesis of Therapeutic Peptides*

## Procedural General Chapters

*<123> Glucagon Bioidentity  
Tests*

*<503> Acetic Acid In Peptides*

*<503.1> Trifluoroacetic  
Acid (TFA) In Peptides*

# USP Peptides Monographs

| Drug Substance   | Drug Product  |
|--|---|
| <i>Calcitonin Salmon</i>                                       | <i>Calcitonin Salmon Injection</i><br><i>Calcitonin Salmon Nasal Solution</i>     |

# Reporting Threshold in Peptide Monographs

| Monograph                        | Reporting Threshold                        | No Reporting Threshold    | No Impurity Test                   |
|----------------------------------|--|---------------------------|------------------------------------|
| <b>Bivalirudin</b>               | Procedure 1: s/n >10<br>Procedure 2: 0.10% | Cosyntropin               | Calcitonin Salmon Injection        |
| <b>Bivalirudin for Injection</b> | s/n >10                                    | Desmopressin Acetate      | Calcitonin Salmon Nasal Solution   |
| Calcitonin Salmon                | Test 1: <b>0.1%</b><br>Test 2: no RT       | Glucagon for Injection    | Repository Corticotropin Injection |
| <b>Eptifibatide future PF</b>    | <b>0.025%</b>                              | Gonadorelin Hydrochloride | Desmopressin Acetate Injection     |
| Exenatide                        | Procedure 1: 0.05%<br>Procedure 2: 0.05%   | Goserelin Acetate         | Desmopressin Nasal Spray Solution  |
| Exenatide Injection              | 0.10%                                      | Goserelin Implant         | Gonadorelin for Injection          |
| <b>Glucagon</b>                  | 0.05%                                      | Leuprolide Acetate        | Oxytocin Injection                 |
| Gonadorelin Acetate              | 0.05%                                      | Oxytocin                  | Vasopressin Injection              |
| Octreotide Acetate               | <b>0.1%</b>                                | Teriparatide              |                                    |
| <b>Triptorelin Pamoate PF</b>    | <b>0.1%</b>                                | Teriparatide Injection    |                                    |
|                                  |  | Vasopressin               |                                    |

# Guidance on Impurities for Peptides

- ▶ ICH Q3A/B Guidance exclude Peptides
- ▶ FDA Guidance: ANDAs for Certain Highly Purified Synthetic Drug Products That Refer to Listed Drugs of rDNA Origin (May 2021)
  - Peptide-Related Impurities:
    - Common impurities (including degradants)  $\leq$  RLD
    - New impurities  $\leq 0.5\%$
    - New impurities 0.10%-0.5% must be identified and justified on the basis of lack of impact on physicochemical properties, biological activity or immunogenicity risk
- ▶ EP Substances For Pharmaceutical Use, for Synthetic Peptides, Table 2034

| Reporting Threshold | Identification threshold | Qualification threshold |
|---------------------|--------------------------|-------------------------|
| >0.1%               | >0.5%                    | >1.0%                   |

# Reporting Threshold Approach for Chemical Derived Drug Substances and Products

- ▶ General Chapter revisions related to reporting threshold
  - Revised <1086> Impurities in Drug Substances and Drug Products, PF 45(1), official on May 1, 2021. Exclude peptides.
  - New GC <476> Control of Organic Impurities in Drug Substances and Drug Products, PF 45(1), official on May 1, 2021. Exclude peptides.
  - New General Chapter <477> User-Determined Reporting Thresholds, PF 48(5), to be official on May 1, 2024. Exclude peptides.
- ▶ Monograph Approach Example for Chemical Derived Drug Substances and Products
  - Use an appropriate reporting threshold. (See User-Determined Reporting Thresholds <477>.)  
[Note—A reporting threshold of 0.05% may be suitable when the maximum daily dose is  $\leq 2$  g.]

# Reporting Threshold Feedback

- ▶ USP BIO 1 Expert Committee is seeking Feedback on the inclusion of Reporting Thresholds in Monographs
  - ▶ Continue providing Reporting Thresholds per current practice
  - ▶ Align with approach for Chemical Derived Drug Substances and Products
- ▶ Contact Julie Zhang to provide feedback
  - ▶ [Julie.Zhang@usp.org](mailto:Julie.Zhang@usp.org)

# USP Reference Standards and Materials

## • Compendial Reference Standards

- Specifically linked to methods in the USP-NF
- Tested in multi-lab studies
- Approved by the appropriate expert committee
  - Monograph RS, e.g., Insulin Aspart
  - Chapter RS, e.g., mAb IgG System Suitability <129>

## • Non-compendial Reference Standards

- Same process as above, but not currently referred to in the USP-NF
- Details on testing/application included in USP certificate
- Assay control, control material for method development, standardization testing across laboratories, method transfer
  - USP mAb 001, 002, & 003 Monoclonal IgG1s

## • Analytical Reference Materials (ARMs)

- Fit-for-purpose assessment
- Details on testing/application on Product Information Sheet
  - CHO PLBL2 Host Cell Protein
  - Many more in development-ATCC Partnership

# Analytical Reference Materials to Support Peptides Impurities

- ▶ Materials focused on Process related and Degradation Impurities
- ▶ Characterized for Identity and Purity
- ▶ Tested by USP compendial Purity method
- ▶ Leuprolide, Octreotide, Oxytocin Impurities first released

| Test  | Results                   |
|---|---------------------------|
| Appearance  | Fine white powder         |
| Identification by IR                                    | Conforms to the Structure |
| Identification by Mass Spectrometry                     | Conforms to the Structure |
| Identification by <sup>1</sup> H NMR                    | Conforms to the Structure |
| Identification by <sup>13</sup> C NMR                   | Conforms to the Structure |
| Purity by HPLC  | 97.5%                     |
| Peptide Content by Elemental Analysis (N Determination) | 78.89%                    |
| TFA Content by HPLC                                     | 13.52%                    |
| Loss on Drying by TGA                                   | 4.06%                     |
| Assigned Value *  | 80.4%                     |

 **ANALYTICAL REFERENCE MATERIAL**

**[D-HIS]-LEUPROLIDE 10 mg**

(5-Oxo-L-prolyl-D-histidyl-L-tryptophyl-L-seryl-L-tyrosyl-D-leucyl-L-leucyl-L-arginyl-N-ethyl-L-prolinamide)

Warning! Suspected of damaging fertility or the unborn child.

Store in a freezer. Protect from light. Material is hygroscopic.

Keep container tightly closed.

The material is for use in analytical laboratory applications.  
See product information sheet for any additional information.

USP, 12601 Twinbrook Pkwy, Rockville, MD, +1-301-881-0666

Cat. No. 1358410 Material mfd. in India

## **USP Standards to Support Therapeutic Oligonucleotides**

---

# Oligonucleotide Therapeutics

- ▶ Growing Therapeutic Modality
- ▶ Includes modified RNA and RNA/DNA hybrids
- ▶ Sub-classes include antisense, small interfering RNAs (siRNA) and aptamers
- ▶ Mechanisms of action can include splice modulation, RNA interference, RNase H-mediated cleavage
- ▶ Most produced by solid phase synthesis
- ▶ 13 products approved by the US FDA between 1998 and 2021

# Phosphoramidites - SM for Oligonucleotide Synthesis

- ▶ Quality of phosphoramidites or other starting materials (SMs) are vital aspects of the overall oligonucleotide control strategy.
- ▶ Deoxyamidites and RNA amidites have been accepted as appropriate SMs for oligonucleotides
- ▶ USP has Identified the most common DNA amidites to develop into RS
- ▶ Impurities in an amidite have been classified as critical and noncritical. It is crucial that the presence of critical impurities in an amidite be tightly controlled and monitored by appropriate analytical tools

## DNA Amidites

# USP DNA Amidites RS

- ▶ Publicly available DNA amidites produced by industry standard production processes
- ▶ Characterized for multiple CQAs
  - They can greatly facilitate development of oligonucleotides
  - Raw materials control

| RS Name  | Item Number | Lot number | Molecular Formula   |
|--|-------------|------------|---|
| iBu dG Beta-Cyanoethyl Phosphoramidite (dG)          | 1152030     | F18040     | C <sub>44</sub> H <sub>54</sub> N <sub>7</sub> O <sub>8</sub> P |
| T Beta-Cyanoethyl Phosphoramidite (T)                | 1152031     | F18050     | C <sub>40</sub> H <sub>49</sub> N <sub>4</sub> O <sub>8</sub> P |
| Bz dA Beta-Cyanoethyl Phosphoramidite (dA)           | 1152032     | F18060     | C <sub>47</sub> H <sub>52</sub> N <sub>7</sub> O <sub>7</sub> P |
| 5-Me Bz dC Beta-Cyanoethyl Phosphoramidite (5-Me dC) | 1152033     | F18070     | C <sub>47</sub> H <sub>54</sub> N <sub>5</sub> O <sub>8</sub> P |
| Bz dC Beta-Cyanoethyl Phosphoramidite (dC)           | 1152034     | F191A0     | C <sub>46</sub> H <sub>52</sub> N <sub>5</sub> O <sub>8</sub> P |

# Extensively Characterized for Physicochemical Attributes

- ▶ Rigorously tested and evaluated in inter-laboratory studies
- ▶ Reviewed and approved by Expert Committee

| Attributes       | Methods                             |
|------------------|-------------------------------------|
| Appearance       | Visual                              |
| Identification   | $^1\text{H}$ NMR                    |
|                  | LC-MS                               |
| Purity/Impurity  | HPLC                                |
|                  | $^{31}\text{P}$ NMR                 |
| Residual Solvent | <i>USP &lt;467&gt; GC</i>           |
| Water            | <i>USP &lt;921&gt; Karl Fischer</i> |
| Hygroscopicity   | <i>Vapor Sorption</i>               |

# More Phosphoramidites Standards to Come

## Other Standards under Development

- ▶ RNA Phosphoramidites Standards
- ▶ MOE Phosphoramidites Standards
- ▶ Documentary Standards
  - Validated Identification and Purity methods

# Expert Volunteers help power USP's impact on global public health

Serving on Expert Committees, Panels and Sub-Committees, they collaborate to develop quality standards and other solutions that help build a more resilient supply of quality medicines.
